Parkinson’s Disease

Current Awareness Bulletin

August 2015

The following bulletins are also available:

- Children’s Continence
- Continence
- Dementia
- End of Life Care
- Infection Control
- Nutrition
- Parkinsons Disease
- Rehabilitation
- Safeguarding

If you would like to receive these bulletins on a regular basis please contact the library.

For any references where there is a link to the full text please use your NHS Athens username & password to access. (if you need any help with this please let us know)

If you would like any of the full references from those that do not have links please let us know & we will source them for you.

Title: A narrative review of turning deficits in people with Parkinson's disease.

Citation: Disability & Rehabilitation, 15 July 2015, vol./is. 37/15(1382-1389), 09638288
Author(s): Hulbert, Sophia, Ashburn, Ann, Robert, Lisa, Verheyden, Geert

Abstract: Purpose: Clinically, people with Parkinson's disease (PD) demonstrate a loss of axial rotation of the spine often described as moving 'enbloc', with little dissociation between the head, trunk and lower limbs whilst turning. The purpose of this narrative review is to explore the behaviour and relationship of the reported deficits during whole body turning in people with PD, compared to controls. Better understanding of the relationship and impact of the deficits will permit the development of tailored and novel intervention strategies to improve functional performance in turning for people with PD. Methods: Four electronic databases with the search terms: Parkinson* and turn* were used. Results: Seventy-seven papers were reviewed. Turning deficits in people with PD were identified as originating from two hypothetical body segments - perpendicular (i.e. legs) or axial (i.e. head, trunk and pelvis) segments and the relationship between them discussed. Conclusion: Specific movement deficits in turning in people with PD can be categorised into axial and perpendicular deficits. Synthesis of the literature suggests the possibility of axial deficits driving secondary responses in the perpendicular segments. This should be explored when designing rehabilitation aimed at improving turning performance, as current therapy guidelines focus on exercises emphasising perpendicular aspects.

Title: Active and Passive Methods of Detecting Parkinson's Disease.

Citation: Journal of the American Geriatrics Society, 01 June 2015, vol./is. 63/6(1261-1263), 00028614
Author(s): Wen, Chiung-Jung, Yen, Amy Ming-Fang, Chiu, Sherry Yueh-Hsia, Chen, Sam Li-Sheng, Fann, Jean Ching-Yuan, Hwang, Yuarn-Chung, Chen, Ta-Fu, Wen, Ying-Rong, Liou, Horng-Huei, Chen, Hsiu-Hsi

Title: How do people live life successfully with Parkinson's disease?

Citation: Journal of Clinical Nursing, 01 August 2015, vol./is. 24/15/16(2314-2322), 09621067
Author(s): Kang, Mi-Young, Ellis-Hill, Caroline

Title: Levels and Patterns of Physical Activity and Sedentary Behavior in Elderly People With Mild to Moderate Parkinson Disease.

Citation: Physical Therapy, 01 August 2015, vol./is. 95/8(1135-1141), 00319023
Author(s): Wallén, Martin Benka, Franzén, Erika, Nero, Håkan, Hagströmer, Maria

Full Text: Available from EBSCOhost in Physical Therapy
Available from ProQuest in Physical Therapy
Title: Toward Understanding Ambulatory Activity Decline in Parkinson Disease.

Citation: Physical Therapy, 01 August 2015, vol./is. 95/8(1142-1150), 00319023
Author(s): Cavanaugh, James T., Ellis, Terry D., Earhart, Gammon M., Ford, Matthew P., Foreman, K. Bo, Dibble, Leland E.

Title: Fatigue in Parkinson Disease: An Integrative Review.

Citation: Journal of Neuroscience Nursing, 01 June 2015, vol./is. 47/3(146-153), 08880395
Author(s): Bruno, Amy E., Sethares, Kristen A.
