Roche Blood Gas Analyser
Capillary Analysis
Summary Flow Chart

Sample Preparation

- Collect sample into capillary tube
- Eliminate air bubbles
- Attach a clot catcher

⬇

Sample Analysis

- Log into analyser using your individual username/password
- Introduce capillary tube firmly into the orange fill port (green light appears)
- PRESS aspirate sample and wait until a beep is heard
- Remove capillary but do not discard blood until results obtained

⬇

Enter Patient Details

- During analysis, complete all RED mandatory fields
- Use Δ and ∇ and SET INPUT VALUE buttons to do this
- Once analysis is complete, a paper report will be printed.

⬇

Result Recording

- Transcribe all relevant results in the patient notes & include the following:
  - Test Result(s)   - Date and Time   - Location of test
  - Signature   - Also record any failed attempts
- Log off
