

PATIENT INSTRUCTIONS FOR ACIDIFIED 24 HOUR URINE COLLECTION **OXALATE, CITRATE and CYSTINE**

A Pathology Millennium label, ICE label or request form must be handed in with the urine collection.
Samples received without a request may not be tested.
Start and finish dates and times must be written on the bottle.

CAUTION

These collections require a **strong acid preservative** which is a clear liquid and **must NOT be discarded**. Please ensure the container is stored safely, upright and out of reach of children.

Avoid any skin contact with acid. If any skin contact, wash area with excess water and seek medical advice immediately.

Preparation:

There are certain medications and foods which can affect urine oxalate excretion – suggest discussion with your clinician prior to starting your 24 hour urine collection.

Procedure:

24 hr means a complete timed 24 hour collection of urine collected as follows-

1. When you wake up, empty bladder **into the toilet** (i.e. discard it). Record this **date and time** on the container. This is the start time of your collection (e.g. 8am on the 6th March).
2. ALL urine passed, day or night, **after the start time**, must be collected in the container for the next 24 hours, i.e. until the same time the following day.
3. At the finish time (e.g. 8am on the 7th March) you should empty your bladder in to the container.
4. Please record the finish **date and time** on the urine container label.

After your collection:

Please ensure to write your **full name, date of birth, GP surgery/ward** and **NHS number** clearly on the urine bottle, or check all of these details if they have been completed for you.

Unlabelled samples will NOT be processed and will have to be repeated.

Ensure the lid is screwed on firmly.

If you have any questions, or are experiencing any problems, please contact the laboratory on: (01225) 824712 (direct line).

Please return the collected bottles to your GP practice, directly to the hospital or to the laboratory.
