Having a MRI Scan

A MRI scan takes pictures of the inside of your body.

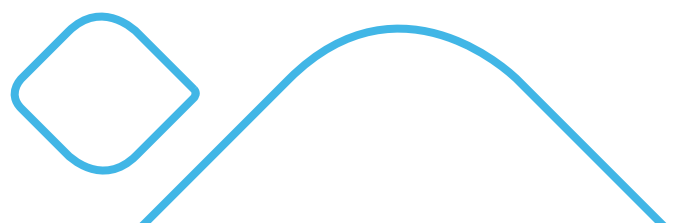

A radiographer will help you with your scan.

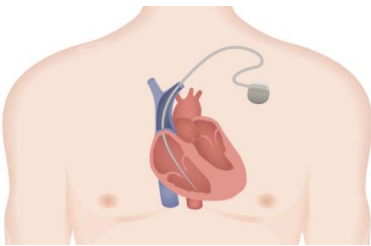

This is what a MRI scanner looks like.

It does not hurt.

You must take off any jewellery or watches.

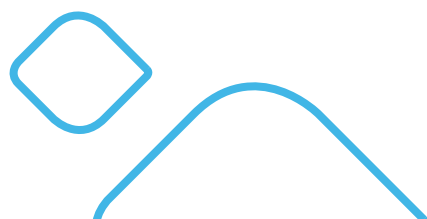

You must tell the radiographer if you have a pacemaker or any metal inside your body.

You might need to take your clothes off and put on a hospital gown.

The MRI scanner is very noisy.

You can ask to listen to music or watch a film.

You need to lie on a special bed.

You can ask for somebody you trust to stay with you.

The radiographer will move the bed into the scanner.

The scan might take a long time.

The radiographer will move the bed out of the scanner when the scan is finished.

The scan will help the doctors decide if you need treatment.

Please contact the Patient Support and Complaints Team if you require this leaflet in a different format, or would like to feedback your experience of the hospital.
